

Getting started with Mako

Follow these steps the first time you use Mako. You only need to do most of this once.

1. Sign in

1. Open Mako in your browser.
2. Go to **Sign in**.
3. Create an account or sign in with email, Google, or LinkedIn.

Your first sign-in sets up your company space and a default workspace for you. You are the owner of that space.

2. Complete the welcome wizard

If this is your first visit, a short welcome flow may appear.

1. Enter your **company name**.
2. Add a short **description** of what you do.
3. Continue.

You can refine everything later in Brand Brain.

3. Set up Brand Brain

Open **Brand Brain** from the Create menu.

Fill in as much as you can. Better brand details mean better AI suggestions later.

Include:

- Company name and what you offer
- Who your audience is
- Tone of voice (for example: friendly, expert, playful)
- Offers, promotions, or key messages
- Words or topics to avoid
- Competitors and keywords (optional)
- Your website (optional — Mako can learn from it)

- Brand documents (optional)

Save when you're done.

Tip: Spend 10–15 minutes here before generating posts. It pays off.

4. Connect your social accounts

Open **Connections**.

Connect the channels you want to publish to, such as:

- Facebook Page
- Instagram
- LinkedIn
- X (Twitter)
- YouTube
- TikTok
- WhatsApp

You can create drafts without connecting accounts, but you need connections before posts can go live.

5. (Optional) Invite your team

If other people will write or approve content:

1. Open **Team**.
2. Invite people by email.
3. Give each person a role that matches their job (see [Team roles & approvals](#)).

6. (Optional) Add another workspace

Use **Workspaces** if you manage more than one brand or business unit. Each workspace can have its own Brand Brain and content.

You're ready. Next: [How to manage content](#).
